

## Experiment 12

Aim : Outline a registration form using PHP and do necessary validations.

Code : PHP

```
<html>
<body>
<?php
$name = "";
$email = ""; $phone = ""; if
($_SERVER["REQUEST_METHOD"] == "POST")
{
    $name = $_POST['name'];
    $email = $_POST['email'];
    $phone = $_POST['phone'];
    $valid = true;    if(empty($name)) {        echo
"<script>alert('Please enter valid name.')</script>";
    $valid = false;
    }
    if (empty($email))
    {
        echo "<script>alert('Please enter valid email.')</script>";
        $valid = false;
    }
    if (empty($phone))
    {
        echo "<script>alert('Please enter valid phone no.')</script>";
```

```

$valid = false;
}
if($valid){
$name = "";
$email = ""; $phone = ""; echo
"<script>alert('Submission successful!')</script>";
}
}
?>
<h1>Registration Form</h1>
<form method="post" action="#">
Name: <input type="text" name="name" value="<?php echo
$name; ?>"><br> email-Id: <input type="email" name="email"
value="<?php echo
$email; ?>"><br> phone : <input type="number" name="phone"
value="<?php echo
$phone; ?>"><br><br>
<input type="submit">
</form>
</body>
</html>

```

Output :

## Registration Form

Name:   
email-id:   
phone:

Activate Windows  
Go to Settings to activate Windows.

localhost says:  
Submission successful!
